

Public Access Trauma Kits

WHAT IS A PUBLIC ACCESS TRAUMA KIT (PATK) AND HOW DO I GET ONE?

PATKs are stocked with equipment used to treat of traumatic injuries and placed in easily identifiable and accessible locations. These kits offer community members the equipment needed to provide time-sensitive, life-saving intervention prior to the arrival of first responders.

The minimum contents should include:

- Identifying markings/label
- Gauze or hemostatic gauze
- Emergency Trauma Bandage
- Tourniquet
- Shears
- Gloves

WHERE SHOULD I STORE MY TRAUMA KITS?

Place in easily identifiable AED cabinets or mount adjacent to them to create a centralized safety station.

Individual Kit

Vendor
North American Rescue
